Series 310-320

Long Stroke AC Gaging LVDTs

上海江晶翔电子有限公司

The Series 310-320 Long Stroke AC Gaging Transducers consist of a precision AC LVDT, a rugged stainless steel outer housing, and a spring actuated, stainless steel shaft. Consistent with the high performance normally found in Trans-Tek precision AC LVDTs, these transducers exhibit excellent non-linearity and extremely low temperature coefficients. Available in full stroke displacements of 0.5 to 20 inches, the transducers are ideal for use in single or multi-point gaging systems, thickness measurements, machine control, or any other applications requiring a precision, spring actuated linear displacement measurement.

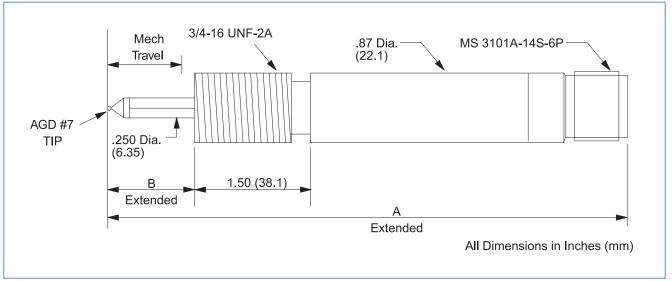

KEY FEATURES

- Ranges from ±0.25" to ±10.0"
- Non-linearity < 0.25%
- Stainless Steel Construction
- Reversible Spring Option

DC-DC OPERATION WITH OPTIONAL OSCILLATOR/DEMODULATOR

To facilitate prototyping, or in instances where the preference is a DC in - DC out system, any of the standard Series 310-320 can be used in conjunction with the Series 1000 Oscillator/Demodulator. Designed to work together, the DC system gives the same level of performance as provided by the AC LVDT alone. The high level DC output voltage can be directly interfaced

with analog circuits as well as data acquisition cards, PLCs, or A/D converters. Provisions for customizing the Series 1000 to provide zero offsets and nonstandard gains allow a simple and cost effective method of tailoring a system to meet individual customer requirements. Detailed connection information can be found in the Accessories portion of this catalog.
